

Mainframe's Guide to #youth UNO!

The Objective of the game

UNO! is a reasonably simple game in which the objective is to get rid of your cards before everyone else manages the same thing. The game is surprisingly good fun once you start playing (and very addictive)

Playing the game of UNO!

UNO is a card game, so it would be a good idea for me to explain the cards to you. There are four different colours. **Yellow** **Green** **Red** and **Blue**. Most of the cards are one of these colours with a number after them. For example one card is **Green 5**. The numbers at the end are any number between (and including) 0 to 9. When a card of a colour has been played then you can play a card of the same colour.

An Example: The person before you played **Green 5** and you have **Green 9** As you have a green card you can play the card (**Green 9**)

You don't always have to play a card of the same colour though. Let me show you with an example. If the previous card was a **Green 9** and you have a card that is a 9. Then you can play that 9 card. For Example after a **Green 9** you might play **Red 9**

So, you can play a card of the same colour or number as the card that was played before it.

However, not all of the colour cards end in a number. There are three exceptions. The Skip, the Draw 2 and the Reverse. Like with number ending you can play a skip card after a skip card no matter what colour and same for draw 2. However these cards affect the game play.

A Skip card, (such as **Yellow Skip**) will cause the person after you to miss their go.

A draw 2, (such as **Blue Draw 2**) will cause the person after you to get two more cards in their collection AND miss their go!

Then there is the Reverse card, (such as **Red Reverse**) these cards cause the order in which you were playing to change. So you play the opposite way, you not play to the person who played to you, and the person you played to now plays to you.

Confused!?! – you should be. However there are some cards I've not told you about. The **WILD** cards.

There are two different **WILD** cards. **WILD** and **WILD Draw Four**!

You can play these cards at anytime. After playing these cards you get to choose a new colour. After this colour has been chosen only a card of that colour or a **WILD** can be played.

WILD can only change the colour of the cards, you play it and everything carries on like normal

WILD Draw Four When this is played, not only do you choose the new colour but the person after you picks up another four cards (like a draw 2) and the person after you also skips their go (like a draw 2)

Playing UNO! In #youth

So, how do you play a game with me? Well, when a gamer or op starts the UNO! game you need to join the game to play, you can also join the game at any point. To join a game simply type jo in #youth.

To play a card type pl then the card. Some examples of cards and what you type to play them are below

Green 5	Pl g5
Yellow Skip	Pl ys
Blue Draw 2	Pl bd2
Red Reverse	Pl rr
WILD	Pl w
WILD Draw Four	Pl wd4

Some times you might not have any cards that you can play. In this event you type dr and I will give you a new card from the pile of cards that I did not deal out when I dealt everyone 7 cards at the start. If the card I give you, you can go with simply play it like a normal card. If you can't after you have picked up a card then you will have to pass on your go. To do this simply type pa

After you have played a wild card you get to chose a new colour, this is done with the co command. If you wanted to chose blue you would type
co b

Well that is the basics you need. If you are unsure during the game type !unocmds and I will give you a quick reminder. Alternatively look back here.

Who is winning and other 'stuff'

There are some more commands that you do not need to know to play the game, however they are useful. I have put them in a table below.

Ca	Shows you your hand of cards again
Cd	Shows everyone the last card played
!unowon	Details of how many games you have won
!unowon nick	Details of how many games nick has won
!unotop10	The score board of the top 10 UNO! players in #youth! 😊
Tu	Tells you who's turn it is
Od	Tells you the order in which you are playing
Ct	Tells you how many cards everyone has left
Ti	Tells you how long you have been playing for
St	Some statistics about your game

If you have to go part way though the game, or you don't want to carry on playing, simply type !remove and you will no longer be in the game. You can rejoin at any point using the jo command.
